

Making use of more than 30 years of experience in the design and production of catalysts, particulate filters, silencers and exhaust systems for endothermic engines, Bersy is now offering high-quality solutions in the production of a wide range of exhaust systems and accessories for motor boats.

In addition to the production of bespoke cooled manifolds made according to customer's specifications or design, BERSY also designs and manufactures customised exhaust gas kits to satisfy any application.

BERSY's product range also includes: risers, stainless steel silencers, insulation, compensators and flexible couplings. Bersy only uses cutting edge materials for the production of these items to safeguard their performance and long term reliability.

Its highly specialized team is able to offer customers outstanding technical support to identify the most suitable solution for any application and demand.
